## Allowable Subject Matter & Reasons for Allowance

6. Independent claims 1, 7, 17, and 25 are patentable over the closest references of McBain, Langston, and Waterman because they do not anticipate nor fairly and reasonably disclose a method or a system for determining a pre-defined flight path that the air vehicle is directed to a claimed by applicant, besides other limitations, above claims require that the air vehicle is directed to the predetermined safety flight path without any assistance/signal from a location remote to the air vehicle. The onboard system of the air vehicle, on its own determination, is responsible for the directing the air vehicle to the predetermined safety flight path.

In Langston, the ground control segment communicates with the cockpit and determines where to send the plane.

Art Unit 3661

McBain directs a specific air vehicle to a safe air location based on the air vehicle's current location in the air. Additionally, McBain requires a signal from a remote location in order to direct the air vehicle to a safe air location.

Waterman also receives a signal from a remote location to direct the air vehicle to a safe air location; Waterman does not store a predetermined safe flight path prior to take off of the air vehicle.

- 7. Claims 6, 8-15, and 18-20 are allowed because they are dependent on claims 1, 7, and 17.
- 8. Claim 6 is renumbered as claim 2;Claims 17-20 are renumbered as claims 3-6;Claim 25 is renumbered as claim 16.
